# Test Review

October 5

97% of water on Earth is saltwater  
 only 3% is fresh  
 of that 3%, 76% is ice  
 fresh water comes from shallow ground  
 water, lakes & rivers

2 examples of properties of water:  
 Surface tension

capillary action

$$1,280 \text{ billion liters} \times .387 = 495.36$$

Ice is less dense than liquid water, so it floats.
